

How to Use AI in Lesson Planning

1

Select the AI assistant
of your choice
(Gemini, ChatGPT, etc)

2

Define your role & goal
(Let your assistant know who
they are in the scenario)

3

Set your guardrails
for the assignment
(Be specific!)

4

Insert the standard you
want to meet

5

Brainstorm with your AI
assistant
(Pass ideas back and forth, what
works and what doesn't)

6

Refine & Finalize
(make any changes necessary
to make your lesson exactly what you
need)
